

Copilot

Certainly! Here's a simple template for a cash verification log in markdown format. You can fill in the counts for each denomination, and the totals will be calculated accordingly.

Cash Verification Log

Bills

Denomination	Count	Total
\$100		\\$0
\$50		\\$0
\$20		\\$0
\$10		\\$0
\$5		\\$0
\$1		\\$0

Coins

Denomination	Count	Total
\$1 (Coin)		\\$0
\$0.25		\\$0
\$0.10		\\$0
\$0.05		\\$0
\$0.01		\\$0

Totals

Bills Total	Coins Total	Grand Total
\\$0	\\$0	\\$0

To use this log:

1. Enter the count of each denomination in the 'Count' column.
2. Multiply the count by the denomination to get the 'Total' for that denomination.
3. Sum all the totals for bills and coins separately, and then combine them to get the 'Grand Total'.

This template is a static example. If you need a dynamic version that calculates totals automatically, you might consider using a spreadsheet program like Microsoft Excel or Google Sheets. Would you like guidance on how to set this up in a spreadsheet?
